DARB Student Components

Reusable student-side interface components | Responsible member: Dana

Purpose

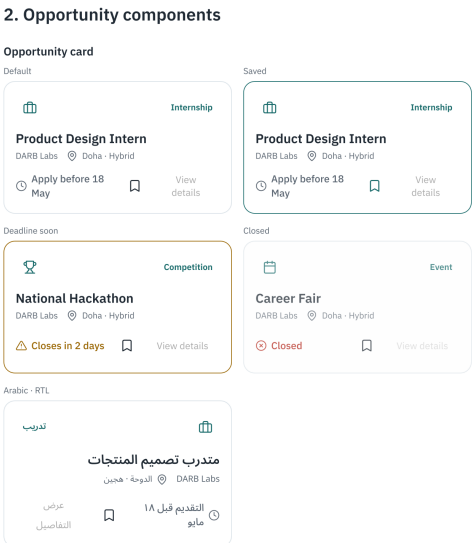

Design reusable components that help students discover opportunities, manage their profiles, save opportunities, and follow application progress. All components follow the DARB design system and support English (LTR) and Arabic (RTL).

1. Opportunity components

Opportunity cards: Show title, organization, type, location, mode, deadline, and actions to save or view details. Variants include default, saved, deadline soon, closed, and compact.

Recommended cards: Add an AI match score and a short reason explaining why the opportunity fits the student's skills or interests. Intended for the Home carousel.

Category chips: Show an icon and category label, with default and selected states; optional counts can show the number of opportunities.

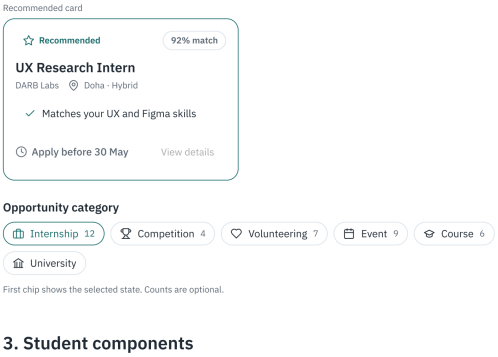

2. Student components

Profile summary: Display avatar or initials, name, university, major, and profile completion, with an edit action.

Skills and interests: Reusable chips with read-only, selected, removable, add, suggested, and empty states.

Saved opportunities: Compact saved cards with active and expired states and a bookmark indicator.

DARB Student Components

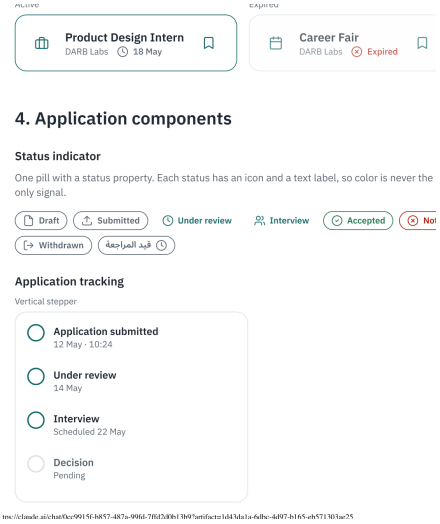

Application, AI, documentation and design standards

3. Application components

Status indicators: Labeled pills for Draft, Submitted, Under Review, Interview, Accepted, Not Selected, and Withdrawn. Each status combines an icon and text with its color.

Application tracking: A vertical stepper showing stages, dates, and completed, current, or upcoming progress.

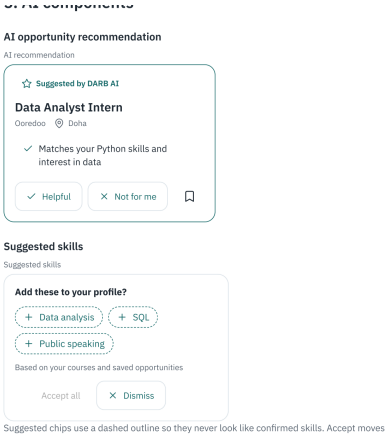

Deadline reminders: Banners for normal, due-soon, closing-today, and closed deadlines.

4. AI components

AI opportunity recommendations: Include an AI label, opportunity details, match explanation, and Helpful / Not for me feedback.

Suggested skills: Dashed-outline chips based on courses and saved opportunities. Students can accept suggestions into their profile or dismiss them.

5. Design standards

- Use only the DARB palette and approved text styles: IBM Plex Sans for English and Noto Sans Arabic for Arabic.
- Use outline icons from the library (16, 20, or 24px); keep at least 8px between icon and text.
- Build with Figma Auto Layout, reusable styles, and component properties.
- Provide EN and AR versions. Mirror directional icons in Arabic; do not mirror search, clock, or check.
- Interactive touch targets must be at least 44 × 44px. Status colors must always appear with an icon and label.
- AI content must be clearly labeled and dismissible.

Team items to confirm

The AI/sparkle icon is not yet available, so the featured star is used temporarily. Light Teal represents in-progress states because there is no information status color. The Secondary Text color #5B6772 is provisional and needs confirmation.

Deliverables

Research and component requirements • Student UI component designs • Component documentation • Reusable Figma components and variants • Final screenshots
